

4 GHz integer – N PLL synthesizer

Part number

- RS3010

Overview

The RS3010 is a digital integer-N PLL synthesizer operating in the 4 GHz frequency band. The RS3010 allows the selection of multiple reference frequencies and easily adjust of the output frequency and loop dynamics. The output frequency can be easily tuned to other frequency bands.

Features

- Low phase noise VCO
- Multi-band VCO
- Programmable KPD gain
- Dead-zone mitigation
- 1.8V supply voltage

Deliverable

- Close source database (flat GDSII)
- Support

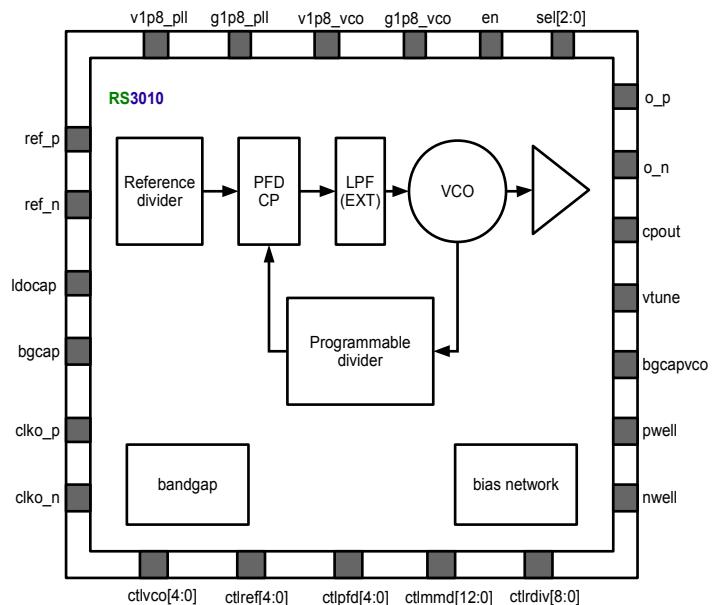

Applications

- Wireless receivers
- Wireless transmitters
- Radar systems
- Frequency sources

Technology node

- TowerJazz SBC18

Block diagram

Main specifications

Parameters	Value
Frequency range	3.8 GHz – 5.1 GHz
Charge pump current	~ 0.3mA to 1.6 mA
Area	0.65 mm x 0.87 mm
DC current	35mA
Supply voltage	1.8V
